[Integumentary Skeletal And Muscular System Answer Key](#)

Anatomy and Physiology: Integumentary, Skeletal, and Muscular Systems Answer Key 16. 1. Anagen: active phase of the hair. Cells of the root of the hair rapidly divide. Lasts an average of 3-5 years. 2. Catagen: hair growth stops, the outer root sheath shrinks and attaches to the root of the hair. This is the formation of a club hair. This is a transitional phase that lasts 2-3 weeks.

[Skeletal, Muscular, and Integumentary Systems](#)

Integumentary, Skeletal, and Muscular Systems The construction of the tissues of the body involves developmental phenomena at two levels of organization. One is the level of individual cells, in which the cells that make up a tissue undergo increasing specialization through a process called cytodifferentiation (see discussion of restriction, determination, and differentiation, [p. 85]).
